The successive round of geophysical field works by the method of magnetotelluric sounding in the territory of Gornyi Badakhshan oblast of the Tajik Republic has been successfully completed. These research works were fulfilled in the frame of international collaboration of Research Station and researchers from Kyrgyzstan, Tajikistan and Germany: Memorandum of understanding within the Program “Geodynamics of Tian Shan and Pamir”, Agreement on Scientific and Technical Collaboration between RS RAS and the Center for Earth Sciences (Potsdam, Germany), Agreement on Scientific and Technical Collaboration between RS RAS, IRC-GPG and the Institute of Geology, Seismic Construction and Seismology of Academy of Sciences of the Tajik Republic.

Magnetotelluric research on the territory of Pamir Gornyi Badakhshan oblast is a part of multi disciplinary international project TIPTIMON (Tien-Shan-Pamir Monitoring Program), aimed to investigation of geodynamic monitoring results and climatic factors interaction for Central Asia states – Kyrgyzstan, Tajikistan and Uzbekistan.

Congratulations!
